FEATURES

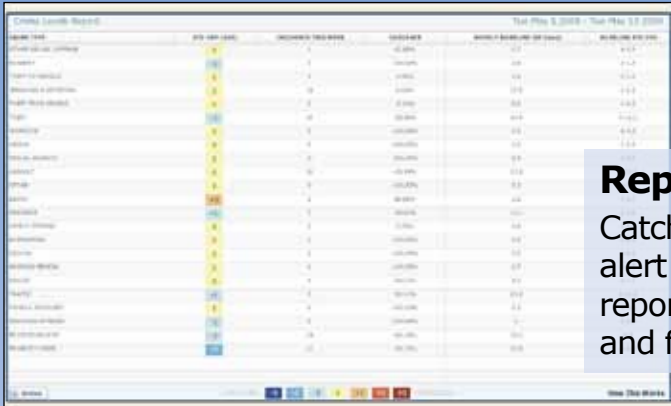

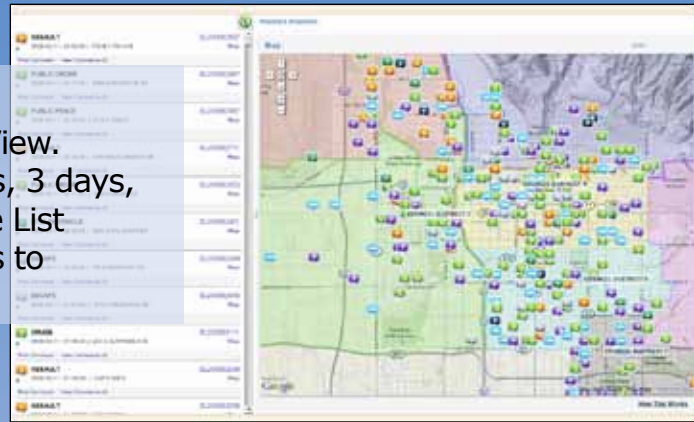

Dashboard

Compare data by date, area, crime type, and day/time of week with four powerful graphs. Each graph supports drill-down capability, allowing you to move from high-level trending views to incident-level data.

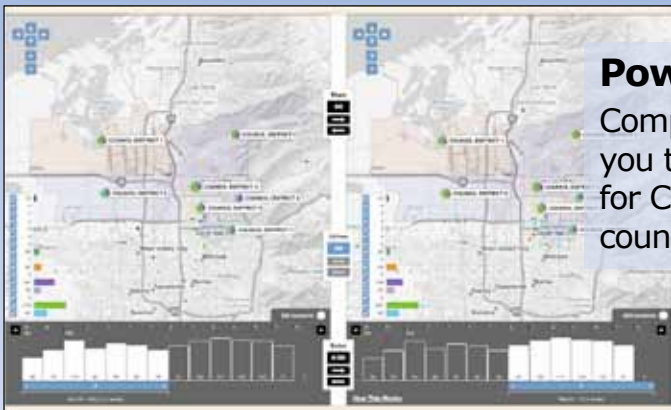

Roll Call

Get a snapshot of crime with the interactive Map and List View. Adjust the date range and view crimes in the past 24 hours, 3 days, 3 months, or more. Click an incident marker and watch the List View highlight the selected crime, giving you instant access to incident details.

Reporting

Catch a rise or fall in crime immediately with an automated alert system. Based on 90-day averages for your area, this report highlights crimes that are above or below average levels and flags them.

Power Maps

Compare crime statistics in a side-by-side map that allows you to customize crime types, areas, and date ranges. Great for CompStat, Neighborhood Watch presentations, or city council meetings.

TrendCaster

Evaluate policy changes, beat assignments, and overall crime trends with a heat map that highlights areas where crime is on the rise and decline.
